

**Hiroshima in the International Context:
How the World Reported the 60th Anniversary of the Atomic Bombing**

INOUE Yasuhiro

Session on July 30 at HIROSHIMA and PEACE 2009

This session consists of two parts: lecture and discussion. The discussion will be based on the content of the newspaper articles. Students are required to read all the newspaper articles (listed below) about the atomic bombing of Hiroshima beforehand. Each article was carried by a leading newspaper of the respective country in 2005, the 60th anniversary of the atomic bombing.

Nation	Newspaper	Headline
US	<i>The Wall Street Journal</i>	Hiroshima: Nuclear weapons, then and now
US	<i>Honolulu Advertiser</i>	A Democrat ordered it, conservatives denounced it
China	<i>People's Daily</i>	Tragedy of Hiroshima
China (Hong Kong)	<i>South China Morning Post</i>	Why the world is in Japan's debt
Korea	<i>The Dong-A Ilbo</i>	While ignoring any apology...
Germany	<i>Frankfurter Allgemeine</i>	The heavens over Hiroshima
UK	<i>Guardian</i>	The birth of 'mere terror'
France	<i>Le Monde</i>	Memory and lapse of memory

We will have approximately 45 minutes for discussion in these small groups. During the last part of the session, we will ask each group to present, to the whole class, a brief summary of the main findings (2-3 minutes for each group).

Suggested topics:

- How is the act of dropping the bomb framed (e.g., as a justifiable means of ending the war, as a tragedy, as a war crime)?
- To what extent are the readers informed of the horrible aftermath and delayed effects of radiation on the victims of the bombing?
- Is the event presented as only a past event, or said (or implied) to be a significant moral lesson that should be passed on to future generations (or trivialized)?
- What (lessons) did you learn from these articles?
- Assuming that you (your group) are the reporter(s) assigned to cover the Hiroshima bombing, what article would you write? How would you portray the event?

Aug. 5, 2005

REVIEW & OUTLOOK

Hiroshima

Today—or August 6 in Japan—is the 60th anniversary of the dropping of the atomic bomb on Hiroshima, which killed outright an estimated 80,000 Japanese and hastened World War II to its conclusion on August 15. Those of us who belong to the postwar generations tend to regard the occasion as a somber, even shameful, one. But that's not how the generation of Americans who actually fought the war saw it. And if we're going to reflect seriously about the bomb, we ought first to think about it as they did.

In 1945, Paul Fussell was a 21-year-old second lieutenant who'd spent much of the previous year fighting his way through Europe. At the time of Hiroshima, he was scheduled to participate in the invasion of the Japanese mainland, for which the Truman Administration anticipated casualties of between 200,000 and one million Allied soldiers. No surprise, then, that when news of the bomb reached Lt. Fussell and his men, they had no misgivings about its use:

"We learned to our astonishment that we would not be obliged in a few months to rush up the beaches near Tokyo assault-firing while being machine-gunned, mortared, and shelled, and for all the practiced phlegm of our tough facades we broke down and cried with relief and joy. We were going to live."

Mr. Fussell was writing about American lives. What about Japanese lives? The Japanese army was expected to fight to the last man, as it had during the battles of Iwo Jima and Okinawa. Since the ratio of Japanese to American combat fatalities ran about four to one, a mainland invasion could have resulted in millions of Japanese deaths—and that's not counting civilians. The March 1945 Tokyo fire raid killed about 100,000; such raids would have intensified had the war dragged on. The collective toll from the Hiroshima and Nagasaki bombings is estimated at between 110,000 and 200,000.

* * *

Nuclear weapons are often said to pose a unique threat to humanity, and in the wrong hands they do. But when President Truman gave the go-ahead to deploy Fat Man and Little Boy, what those big bombs chiefly represented was salvation: salvation for young Lt. Fussell and all the GIs; salvation for the tens of thousands of Allied POWs the Japanese intended to execute in the event of an invasion; salvation for the grotesquely used Korean "comfort women"; salvation for millions of Asians enslaved by the Japanese.

Not least, and despite the terrible irony, the bombings were salvation for Japan, since they prompted Emperor Hirohito to intervene with his bitterly divided government to end the war, thus laying the groundwork for America's benevolent occupation and the country's subsequent prosperity. To understand the roots of modern Japan's pacifist mentality, so at variance with its old warrior culture, one need only visit Hiroshima's peace park.

The same can be said about nuclear weapons in other contexts. America's nuclear arsenal helped thwart Soviet expansionism and provided the umbrella under which Western Europe and the Asian rim countries became—and

The Journal Editorial Report on PBS

Author Philip Howard joins Journal editors for a special look at the fight for legal reform. What went wrong on medical malpractice, class actions, asbestos and more, and how to fix it?

The program is presented by Thirteen/WNET New York. The more than 300 public TV stations

remained—free throughout the Cold War. For embattled Israel, nuclear weapons have not only helped guarantee its existence, they have paradoxically provided it with the margin of strength it needs to contemplate territorial concessions unimaginable for other states its size.

Of course, for every Pershing missile that helped keep Western Europe free, a Soviet SS-20 helped keep Eastern Europe captive. In the hands of democracies, nuclear weapons safeguard liberty; in the hands of dictatorships, they safeguard despotism. It's doubtful the Soviet Union could have survived as long as it did had it never developed nuclear weapons. That's true for North Korea today, and it explains why the mullahs of Tehran seek to bolster their faltering regime with an atomic bomb.

Also true is that the threat nuclear weapons pose today is probably greater than ever before. That's not because they're more plentiful—thanks to the 2002 Moscow Treaty (negotiated by John Bolton), U.S. and Russian arsenals are being cut to levels not seen in 40 years. It's because nuclear know-how and technology have fallen into the hands of men such as A.Q. Khan and Kim Jong Il, and they, in turn, are but one degree of separation away from the jihadists who may someday detonate a bomb in Times or Trafalgar Square.

* * *

Reflecting on this history, there's a tendency to wax melancholic about the dangers of letting the proverbial genie out of his bottle, and to suggest we stuff him back in. Thus the reflexive opposition by Democrats and some Republicans to developing new nuclear weapons such as the "bunker buster" and to the resumption of nuclear testing. The Senate has even zeroed out of the President's budget funding for a high-powered laser that would help gauge the reliability of the U.S. arsenal without testing. We also frequently hear calls for the U.S. to lead by example by further reducing its arsenal, and for the Bush Administration to "strengthen" the Nuclear Non-Proliferation Treaty by agreeing to the useless Comprehensive Test Ban Treaty.

Yet the notion that the nuclear genie can be willed out of existence through the efforts of right-thinking people is as absurd as it is wrong-headed. Just as guns and knives will be with us forever, so too will the bomb. We need bunker busters because North Korea and Iran are using underground facilities to build weapons that threaten us, and we must be able credibly to threaten in return. We need to have nuclear tests because the reliability of our principal warhead, the W-76, has been seriously called into question, and China must not be enticed to compete with us as a nuclear power. In neither case does the U.S. set a "bad example." Rather, it demonstrates the same capacity for moral self-confidence that carried America through World War II and must now carry us through the war on terror.

Looking back after 60 years, who cannot be grateful that it was Truman who had the bomb, and not Hitler or Tojo or Stalin? And looking forward, who can seriously doubt the need for might always to remain in the hands of right? That is the enduring lesson of Hiroshima, and it is one we ignore at our peril.

London's Bombs Go Off Inside America's Head

On September 11, 2001, Islamic terrorists flew two planes into the World Trade Center, one into the Pentagon and one into rural Pennsylvania. In just over an hour, they killed nearly 3,000 Americans. Not more than a year later, nothing was more important in the lives of many Americans than that they extinguish the Patriot Act and drive George Bush and every remnant of his presidency from office, including the "unconstitutional" war on terror.

March 11, 2004, terrorists cut from the same Islamic cloth as September 11 blew up four Spanish commuter trains, covering Madrid's main station with parts of 191 dead people and 1,460 others, often horribly wounded. But the needle hardly moved in the politics of "George Bush's war on terror." In the U.S., nothing was more important than "closing" a holding pen for Islamic terrorists in Cuba.

July 7, 2005: the London bombings. In the four weeks since this happened, I have talked about it, on the West Coast and East Coast, with people one could describe as "non-Bush voters." To a man and woman, they say in so many words that the time has come to "get tough on the terrorists." One event, London, appears to have caused an internal reassessment among some Americans formerly ambivalent about the war on terror.

Profiling, a forbidden thought in some political quarters since hyper-thyroidic New Jersey state cops were robbing black people on the turnpike, is a subject for polite company. After years of reading how our "policies" were creating Islamic recruits to jihad, the London bombing has created recruits for the war on terror.

What happened?

Reality happened. September 11 was, in a sense, unreal. T.S. Eliot reflected in 1922 on "unreal" post-war London: "I had not thought death had undone so many/Sights, short and infrequent, were exhausted/And each man fixed his eyes before his feet." I think for some, what happened that day—passenger planes flew into buildings, the slow death of the towers—was just too much, off the charts, a trauma and a personal concussion. Something like that.

July 7 London was more comprehensible. Americans were able to absorb London more clinically, observers from afar. London also happened to an English-speaking people, so every televised comment back to the U.S., from the first witnesses to the police reports of apprehended and named terrorists, was understood and internalized. Then the British media, God bless them, reduced the madness to one, right cliché: The bombers are our neighbors. Three years in, the battle lines finally come clear.

The American psyche, or some part of it has seemed disinclined to believe terrorist could be anything other than invaders from another planet. Seasonal, like the hurricanes. No matter that the Lackawanna Six, who pleaded guilty to terrorism charges, were a much "the neighbors" in upstate New York a the bombers from London's suburbs. No matter that the trial of the 1993 World Trade Center bombers revealed they too were "the neighbors," or worse, a fifth column.

No matter. Within a year of September 11 one of the most controversial, bitterly contested parts of the Patriot Act was the provision on surveillance of books checked out at the library.

We had become captive to the wrong media cliche. Saying 9/11 "changed everything" meant nothing. That allowed another cliché to take hold and define the policy debate after 9/11: Whatever else, we can't "sacrifice our fundamental values." (I think much of this has to do with the fact that the opposition personally didn't like the Patriot Act's designate evangelist, John Ashcroft, especially after hearing he held Bible readings at work.)

unexpected. And while there are plenty of legal scholars who will say it was wrong, it has some basis in case law and precedent.

In short, while appeals will be launched and alternative strategies devised, it is clear now that Hawaiians-only programs, including those as well-appreciated and successful as Kamehameha Schools, are under vigorous legal attack.

While many are seeing the ruling as a setback, if not an outright defeat, that is not necessarily the final word. In fact, the ruling may accomplish what years of discussion on Hawaiian self-determination have failed to produce: a unified, forward-looking Hawaiian voice on these issues.

This weekend has seen a series of rallies under the sponsorship of the school on all the major islands. These unity rallies, informational gatherings and prayer services were expected to draw a broad spectrum of the community. This includes not just Hawaiians but others who support the mission and goals of Kamehameha Schools.

Here's the interesting thing: Those rallies will bring together Hawaiians who agree on virtually nothing about the self-determination movement. Some support the Akaka bill; others oppose it. Some want to see Hawaiians become a nation within a nation. Others seek total independence.

But there is strong agreement across the board about the importance of Kamehameha Schools as something that belongs to them, has been successful and is not to be trifled with by outsiders.

In short, the ruling may turn out to be a unity builder with greater strength than anything that has come before. If Hawaiians conclude they are of one voice, one perspective on this issue, then they have the potential of becoming a potent political force.

Which is only appropriate,

Those who believe the bomb's use was justified often label their opponents "pacifists," "1960s radicals," "bleeding-heart liberals" or "revisionists." These epithets merely delay the day when Americans will consider the import of having used nuclear weapons.

Our failure to grapple fully with the ethical questions stemming from our use of mass violence against civilians has meant that we unwittingly endorse an act that some would consider state terror.

We rightly expect Germany and Japan to confront painful episodes from their participation in World War II. Now it's our turn.

Conservatives today are the natural candidates to take the lead in confronting our most painful episode from the war, be-

cause they were once among the most vocal critics of the atomic bombing of Hiroshima.

Consider the following: On Aug. 8, 1945, two days after the bombing, former Republican President Herbert Hoover wrote to a friend that "the use of the atomic bomb, with its indiscriminate killing of women and children, revolts my soul."

Days later, David Lawrence, the conservative owner and editor of U.S. News (now U.S. News & World Report), argued that Japan's surrender had been inevitable without the atomic bomb.

He added that justifications of "military necessity" will "never erase from our minds the simple truth that we, of all civilized nations ... did not hesitate to employ the most destructive weapon of all times indiscriminately against men, women and children."

Just weeks after Japan's surrender, an article published in the conservative magazine Human Events contended that America's

One of the main points of contention is based on the understanding that biotech in Hawaii can somehow pollinate with indigenous species, and thereby the purity of our native plants.

As part of an environmental risk assessment, the Hawaii Department of

Bomb

CONTINUED FROM B1

atomic destruction of Hiroshima might be morally "more shameful" and "more degrading" than Japan's "indefensible and infamous act of aggression" at Pearl Harbor.

Such scathing criticism on the part of leading American conservatives continued well after 1945. A 1947 editorial in the Chicago Tribune, at the time a leading conservative voice, claimed that President Harry S. Truman and his advisers were guilty of "crimes against humanity" for "the utterly unnecessary killing of uncounted Japanese."

In 1948, Henry Luce, the conservative owner of Time, Life and Fortune, stated that "if, instead of our doctrine of unconditional surrender, we had all along made our conditions clear, I have little doubt that the war with Japan would have ended soon without the bomb explosion which so jarred the Christian conscience."

A steady drumbeat of conservative criticism continued throughout the 1950s. A 1958 editorial in William F. Buckley Jr.'s National Review took Truman to task for his post-retirement explanation of why he had decided to drop an atomic bomb on Hiroshima. The editors asked the question that "ought to haunt Harry Truman: Was it really necessary?"

Could a demonstration of the bomb and an ultimatum have ended the war? The editors challenged Truman to provide a satisfactory answer. Six weeks later, the magazine published an article harshly critical of Truman's atomic-bomb decision.

Two years later, David Lawrence informed his magazine's readers that it was "not too late to confess our guilt and to ask God and all the world to forgive our error" of having used atomic weapons against civilians.

As a 1959 National Review article matter-of-factly stated: "The indefensibility of the atomic bombing of Hiroshima is becoming a part of the national conservative creed."

But times change. In recent decades, most American conservatives have become uncritical of America's use of atomic weapons and dismissive of anyone who holds a contrary view.

Conservative publications now routinely defend Truman's decision. Critics of his decision,

to quote from a representative National Review editorial from 1987, are "wrong, and profoundly offensive to all Americans and Japanese who died in that war, and to those Americans who still possess the ability to think."

Sixty years after the atomic bombing of Hiroshima, we have an opportunity to grapple anew with the questions surrounding that event.

American conservatives should renew their earlier, deeply held ethical criticism of the Hiroshima bombing instead of promoting the inaccurate but politically convenient view that criticism of the atomic bombing can only come from the left.

Their response will not only tell us much about contemporary American conservatism, it will also determine whether we finally can have an honest debate about Hiroshima's destruction.

A Democrat ordered it, conservatives denounced it; times have changed

Honolulu Advertiser, Aug. 7, 2006 B1

COMMENTARY

By Leo Maley III and Uday Mohan

Yesterdays was the 60th anniversary of the atomic destruction of Hiroshima during World War II.

Americans reflect on this event in sharply differing ways. Some Americans recall the event with shame and express their fervent hope that nuclear weapons never be used again. Others firmly believe that the use of atomic bombs saved American lives by ending the war while precluding a bloody American invasion of Japan.

More challenging to consider is whether it was an unjustifiable act in a fully justified war.

Those who believe the bomb's use was justified often label their opponents "pacifists," "1960s radicals," "bleeding-heart liberals" or "revisionists."

These epithets merely delay the day when Americans will consider the import of having used nuclear weapons.

Our failure to grapple fully with the ethical questions stemming from our use of mass violence against civilians has meant that we unwittingly endorse an act that some would consider state terror.

We rightly expect Germany and Japan to confront painful episodes from their participation in World War II. Now it's our turn.

Conservatives today are the natural candidates to take the lead in confronting our most painful episode from the war, be-

cause they were once among the most vocal critics of the atomic bombing of Hiroshima.

中国国务院扶贫办公室主任刘坚率团参加了此次会议，并代表中国提出了落实千年发展目标的建议。

渔网缠住俄潜艇 日美军方忙救援

据新华社莫斯科8月5日电 (记者岳连国)俄罗斯海军总司令助理德加洛5日说，俄太平洋舰队一艘小型军用潜艇在俄堪察加半岛东海岸海域无法浮出水面的原因是被废弃渔船牢牢缠住。德加洛说，该潜艇是4

内的氧气储备只能用1昼夜。而俄国防部此前曾表示，潜艇发生上述事故的出事潜艇型号为AC-28，目前位于水下约190米。潜艇内共有7名海员，他们都穿着防寒衣，潜艇内食品和饮用水储备够用5昼夜。德加洛强调，目前潜艇

复制当年盛况 寄托和平理想

“郑和”重巡三宝塚

60年前的8月6日，美国在日本广岛投下了人类第一枚原子弹。瞬息之间，整个广岛市变成废墟。14万无辜的日本人死于非命。今年7月底，我出席第五十五届普格瓦什广岛大会时，广岛市市长秋叶忠利告诉我们，广岛人民在遭遇这一厄运后，幸存的人们面对生与死的选择，选择了勇敢地活下去的道路。他们身受灼伤、辐射和白血病的折磨，艰苦生活的困扰，但是坚持活下去，重建了广岛。广岛人民大声疾呼，要防止再次发生核战争，绝不能让人类的悲剧重演。广岛人民意识到，不能树敌；不记住历史，历史就会重演。

5年前，我到过广岛。当时，日本友好人士、著名画家平山郁夫告诉我，1945年广岛遭到原子弹轰炸时，他正在广岛一所中学念书。他的同班同学听到轰隆巨响，纷纷跑出教室，去看天空中一堆灼热的火球。平山郁夫不知什么缘故留在教室中，当他走出教室时，只见到他的同学已经倒在地上，或死或伤，广岛市已遍地废墟。我注意到，平山郁夫先生用非常平静的声调叙述这段往事。他的目光流露出丝丝哀伤。几年前，我和平山郁夫都是21世纪中日友好委员会委员，有七八年时间每年都开会讨论如何加强中日友好。中日双方委员在讨论国际问题时，时而因存在分歧争论不休。平山郁夫先生从来也不参加我们的争论。他年复一年提出一个又一个建议，促进日中友好，加深双方的相互了解。我很少有机会和他直接交谈。但是我来到广岛，听到他谈自己的亲身经历后，我理解他真正懂得应该怎么爱人，怎么来促进中日友好。

我多次到广岛。广岛和平纪念馆展示的文字说明和图片，重现了日本人民遭到原子弹灾害的悲剧，告诉人们无辜的日本人民是战争受害者。几年前，来自重庆的中国客人在广岛参观时告诉日本朋友，来到广岛不禁想到，在中国人民抗战期间，日本对重庆施行大轰炸，和广岛受到轰炸后的情景非常相似。他们邀请广岛人民也到重庆了解当时发生的一切。此后，这个纪念馆也展出日本发动对中国和其他亚洲国家侵略战争造成严重后果的内容。广岛纪念原子弹爆炸受害者的一个大理石纪念碑上刻着：“让人们的灵魂在这里和平地安息吧！我们再不要重复错误！”1952年建立这座纪念碑时的广岛市长曾说，这个错误是指日本军国主义犯下的错误。希望后来人参观纪念碑时新愿不再犯下这个罪行。

我每次到广岛，内心总是有疑惑：日本会不会扪心自问？是不是认识到遭到原子弹轰炸是日本发动侵略战争造成的后果？最近这次到广岛，有机会听到当时幸存者高桥昭博先生叙述他的亲身经历。他说，当时他是一个中学生，在学校时，受到的教育是日本为了生存要打仗，打仗就要杀敌人。他讲到战争受害者不仅是广岛人，还有日本发动侵略战争期间遭到杀害的中国及其他亚洲国家的人。听了这一席话，我多少得到一些安慰。

7月26日，一名日本右翼分子企图用铁锤和凿子铲去这个大理石纪念碑上的“错误”两个字。此人声称“为什么日本要承认错误，这是美国人犯的错误”。次日，广岛电视台先播送美国老兵重返广岛参观的消息，一位美国老兵说：“日本应该记住偷袭珍珠港的历史。美国没有犯下什么错误”。这一天广岛电视台同时播送了日本战俘在纪念抗日战争胜利60周年时重返战场收容所的报道。日本战俘如今多已七八十岁了。他们有的人利用余生制作木刻画，揭露日军侵略中国时犯下的罪行。

当我要离开广岛时，再次凝望今日的广岛。它背倚一片翠意盎然的群山，面对波浪迭起的蔚蓝色海洋，人们过着平静的生活。我在沉思，一场骇人听闻的原子弹爆炸已经过去了60年，岁月的消逝绝不会抹平广岛人民心中的创伤。但更为重要的是人们是否意识到原子弹惨剧是日本对外侵略战争造成的。广岛市市长秋叶忠利说：“不记住历史，历史就会重演！”我在想，如何正确认识历史，依然是人们面对的课题。

Tragedy of Hiroshima: Where is the lesson from history?

楊成績

On August 6, 60 years ago, the United States dropped the first atomic bomb ever used on humankind. Instantly, the city of Hiroshima was completely in ruins, and 140,000 people lost their lives. When I attended the 55th Hiroshima Convention at the end of June last year, the mayor of Hiroshima, Mayor Akiba, said the following: Sixty years ago, the people in Hiroshima encountered the catastrophe of the atomic bomb, and the survivors were faced with the choice between life and death. They, however, chose to live and to fight with burns, radioactivity, and leukemia; struggled with an anguished life; and reconstructed the city of Hiroshima. Citizens of Hiroshima have been campaigning for human beings not to repeat such a tragedy and to prevent nuclear wars. Also we recognize that we should not make enemies and when we forget history we will repeat the same mistakes.

I visited Hiroshima and met Ikuro Hirayama, a painter, five years ago. At that time, he told me his story about the war time. He was studying at a junior high school when the atomic bomb was dropped on Hiroshima in 1945. His classmates heard the detonation sound and went out from the room and saw a fireball in the sky. However, Mr. Hirayama stayed inside the room for some reason. After a while when he went out from the classroom, he saw his classmates were lying dead or injured. The city of Hiroshima was in ruins. Mr. Hirayama reflected on that time and talked calmly; however I could feel the sorrow in deep his eyes. Mr. Hirayama and I have been committee members of 21st century Japan-China Friendship Association and it has been several years since we began holding annual meetings to promote Japan-China friendship. Committee members from both countries, China and Japan, have often held heated debates when discussing international affairs, but he did not join in such arguments. He proposed numerous ideas every year to endorse better friendship and mutual understanding for both countries. I did not have many chances to talk with him personally; nevertheless I felt that nobody truly loved human beings more than he did, and he acknowledged ways to promote better China-Japan relationship when I came and listened to his own personal history.

I have visited Hiroshima many times. The Hiroshima Peace Memorial Museum displays and illustrates the atomic bomb tragedy, and Japanese citizens' appeals that they are the victims of war. Visitors from Chongqing, China, when they visited the Hiroshima Atomic Bomb Museum a few years ago, said to a Japanese friend, "Looking at Hiroshima of those days reminded me of Chongqing during the war against Japan because Japan dropped numerous bombs on Chongqing. Chongqing at that time looked like Hiroshima after the A-Bomb". They invited friends from Hiroshima to show the circumstances in Chongqing of those times. Afterwards, the Hiroshima Peace Memorial Museum started to display materials such as pictures of China and other parts of Asia damaged by the Japanese invasion. The carving on the marble cenotaph in the Peace Memorial park reads 'Let All the Souls Here Rest in Peace, For We Shall Not Repeat the Evil'. The mayor of the city at the time, in 1952 when the cenotaph was built, said 'the Evil' carved on it indicated the mistake Japanese imperialism had committed, and he hoped people who came there would pray for the same mistake never to be repeated.

Every time I visit Hiroshima, I wonder whether the Japanese people really recognize that the result of the atomic bombing arose from the fact that Japan commenced a war of aggression. The last time I visited Hiroshima, I listened to a talk by a victim of the A-bomb, Akihiro Takahashi. At that time he was a junior high school student, and the education he had at school taught him that Japan waged the war to survive, which means Japanese people had to kill their enemies. He explained that the victims of the war included not only people in Hiroshima but also people killed in other parts of Asia, including China, during the Japanese war of invasion. His talk eased my mind to some extent.

On July 26, a Japanese right-winger tried to eliminate 'the Evil' carved on the peace memorial stone chest. "Why on Earth does Japan admit the evil? This is the evil America committed", he insisted. The next day a Hiroshima local broadcast reported that several American veterans came back to Hiroshima and one of them stated, "Japan should not forget the attack on Pearl Harbor. America did not make a mistake." On the same day, the service also broadcast a report on former Japanese prisoners of war who visited a prison camp at Lushun, China, on the 60th anniversary of the war against Japan. The former war prisoners are 70 to 80 years old now, and some of them have addressed an appeal to atone for the acts they committed during the Japanese invasion on China by making woodcuts for the rest of their lives.

Before leaving Hiroshima, I again looked back at Hiroshima City today. The city is surrounded by beautiful green mountains and blue sea, and the people are living in peace. Already 60 years have passed since the horrible atomic bombing, though the scars inside the hearts of the people living in Hiroshima have probably not healed yet. Nevertheless, it would seem to be more important for people to recognize whether the A-Bomb tragedy was caused by the Japanese military invasion of the countries in Asia. The Mayor of Hiroshima Akinori Akiba said, "when people forget about history, the history will be repeated". It will be a huge task for people to comprehend history appropriately.

THE THIRD WAY Nathaniel Myers

Don't abandon the people of Cambodia

In February 2003, the Serious Crimes Unit in East Timor announced it had indicted General Wiranto, the former head of the Indonesian military, for his role in the bloody Indonesian withdrawal from the territory in 1999. As Indonesia angrily condemned the indictment, the UN, which had established and funded the unit, said media reports attributing the indictment to the UN or its prosecutors were mistaken. With Timor's independence in 2002, the secretary general's spokesman explained, the Timorese special panels had become part of the domestic judicial system, even if the UN still provided most of their budget. This was more than an issue of semantics.

Times had changed since the UN intervened in Timor, and the world's leading states were now keen to avoid any confrontation with Indonesia, the world's largest Muslim country.

As a result, the special panels never received the financial support they needed to function and never got the international backing needed to be effective. The vast majority of those indicted had fled to Indonesia in 1999 and Jakarta openly flouted the court's requests for extradition. When the panels held their final hearing in May, some 75 per cent of all suspects indicted were still living freely in Indonesia.

This political abandonment should concern all who believe in justice, but in particular those involved in the upcoming Cambodian Extraordinary Chambers, the tribunal to be

established this year in Phnom Penh to prosecute the surviving leadership of the Khmer Rouge. The Khmer Rouge Tribunal will also be a "hybrid" court, with

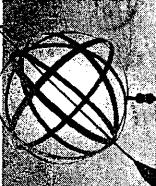

mixed international and national staff, jointly operated by the UN and the national government. Its obstacles will be different, but its challenges will be equally great, and it will require international support to overcome them.

Unfortunately, this support is far from assured. Observers have long expressed concern about the prominent role the troubled Cambodian judiciary will play in the

according to a state government minister in Australia, "there is a tsunami out there called China and we have to find a way around it". That was the rallying cry recently of Andre Haarmeyer, the Victorian government's minister for manufacturing, to his political colleagues around Australia. Victoria is the nation's manufacturing home and some business and political leaders there are concerned the industry will sustain heavy job and investment losses as China's low-priced imports flood into the country.

This week some Australian politicians were trying to get a handle

on "The tribunal is the last chance to bring to justice [the Khmer Rouge leadership] - and it can succeed only with foreign

Why the world is in Japan's debt

HIROSHIMA ANNIVERSARY Tom Plate

in 1971, in my first book *Understanding Doomsday* I wrote: "The moment the United States dropped atomic bombs on Hiroshima and Nagasaki, the world entered what has been called the nuclear age. Yet, except for those two blinding moments in August 1945, doomsday has remained within the confines of man's imagination. On the actual battlefields of the post-war era have raged guerrilla, revolutionary, civil and even generational war - but not, at least as yet, nuclear war."

Today, Japan will note the 60th anniversary of the only tragic occasion in which nuclear bombs were actually used. It will be noteworthy less as a celebration (that no nuclear weapons have been used in war since) than as a rumination -

the point being that we still live in an uneasy era when two nations, the US and Russia, have too many nuclear weapons, more than a few have at least a handful (including, possibly, North Korea) and who knows how many - or if any -

terrorists have the materials, blueprints and fissile material to put one together and set it off.

In short, it is a tragedy that the world still needs to understand the possibility of doomsday, so the world

owes a measure of debt to the Japanese who "celebrate" the anniversary of the first use of nuclear weapons by not only refusing to possess a single one themselves but also by vehemently forsweating the ambition to acquire them. It is to its credit that the Japanese electorate remains, on the whole, deeply pacifist.

As Japanese Foreign Minister Nobutaka Machimura recently put it: "As the only country to have ever suffered nuclear devastation, Japan firmly maintains the three non-nuclear principles - not possessing, not producing and not permitting the introduction of nuclear weapons into Japan." To this I say: Bravo. One must find it extremely telling that Japan - second only to the US in technological prowess - remains a lead exemplar of the anti-nuclear movement.

Japan's own vicious conduct during the second world war is

precisely because of the horrible uniqueness of the experience.

As Richard Falk, a pre-eminent international law pioneer, once wrote: "The depth of the response of the Japanese to their defeat in World War II... is one consequence of the material and spiritual scars left by Hiroshima and Nagasaki. The constitutional prohibition against war and the military establishment, the continuing potency of Japanese pacifism... and the annual commemoratives of Hiroshima, all

catastrophe that rained on tens of thousands of Japanese city-dwellers for whom war could not have ended early enough. Today there are very few survivors left; many perished either in the bombing or

from the various radiation-induced illnesses. But the memories of that nuclear holocaust are fresh in the minds of the Japanese.

As Richard Falk, a pre-eminent international law pioneer, once wrote: "The depth of the response of the Japanese to their defeat in World War II... is one consequence of the material and spiritual scars left by Hiroshima and Nagasaki. Springer plant Fusion mit Pro Sieben Sat.1

him/theu. MÜNCHEN, 5. August. Der Axel Springer Verlag streift eine Übernahme und Verschmelzung mit dem Fernsehkonzern Pro Sieben Sat.1 Media AG an. In einem ersten Schritt hat sich das Berliner Unternehmen mit den bisherigen Mehrheitsgesellschaftern, einer internationalen Investorengruppe, einer Gruppe aus dem Kreis der 2,45 Milliarden Euro geöffnet. Einschließlich der Unternehmensabschüttungen und eines freiwilligen Barangebots an die übrigen Vorratsaktionäre könnte die Übernahme bis zu 4,2 Milliarden Euro kosten. Das Bündeskartellamt hat angekündigt, das Vorhaben von Springer intensiv zu prüfen. Dies könnte bis zu vier Monate dauern. Mit einem Zusammenschluss der beiden Konzerne könnten erfolgreich die digitale Zukunftsgeschäft der Medienbranche in Angriff nehmen. Der Vorstandsvorsitzende von Springer, Döphner: „Die Chancen überwiegen die Risiken bei weitem.“ Im deutschen Werbemarkt erzielte die Unternehmen derzeit zusammen 13 Prozent des Gesamtumsatzes. (Siehe Wirtschaft, Seiten 11 und 14, und Feuilleton.)

Die SPD trotzig Die CDU irritiert

F.A.Z. FRANKFURT, 5. August. Die SPD zieht sich im Aufwind. Es herrsche „große Bewegung“ im Wahlkampf, sagte der Parteivorsitzende Ministerpräsident mit dem SPD auch nur die Duldung einer rot-grünen Minderheitsregierung komme nach dieser Wahl kaum in Frage.

Die CDU beschäftigte sich unterdessen mit den Folgen der DDR-kritischen Äußerungen des Kanzlerkandidaten, Schröder, Schröder. Er hatte die SPD-Politiker einer „Proletarierisierung“ der DDR-Gesellschaft für Verwirrung, Gewaltbereitschaft und für die Gleichgültigkeit gegenüber Verbrechen wie der Tötung von neuen Studenten in der Nähe von Frankfurt/Oder mitverantwortlich gemacht. Die Parteivorsitzende und Kanzlerkandidatin der Union, Angela Merkel, hatte Schönbohm nach Protesten vor allem aus der SPD und der Linkspartei, aber auch aus der CDU im Osten, am Donnerstag zurückgetreten. Schröder und Schröder schlossen eine Koalition mit der „erweiterten PDS“, gemeinsam mit der Linkspartei gelingt. Schröder sagt dann am Freitag: „Was er dort von sich gegeben

Gysi und Lafontaine, beteuerten bei der Vorstellung ihres Wahlprogramms in Berlin, eine Koalition mit der SPD oder auch nur die Duldung einer rot-grünen Minderheitsregierung komme nach dieser Wahl kaum in Frage.

Die CDU beschäftigte sich unterdessen mit den Folgen der DDR-kritischen Äußerungen des Kanzlerkandidaten, Schröder. Er hatte die SPD-Politiker einer „Proletarierisierung“ der DDR-Gesellschaft für Verwirrung, Gewaltbereitschaft und für die Gleichgültigkeit gegenüber Verbrechen wie der Tötung von neuen Studenten in der Nähe von Frankfurt/Oder mitverantwortlich gemacht. Die Parteivorsitzende und Kanzlerkandidatin der Union, Angela Merkel, hatte Schönbohm nach Protesten vor allem aus der SPD und der Linkspartei, aber auch aus der CDU im Osten, am Donnerstag zurückgetreten. Schröder und Schröder schlossen eine Koalition mit der „erweiterten PDS“, gemeinsam mit der Linkspartei gelingt. Schröder sagt dann am Freitag: „Was er dort von sich gegeben

hat, ist eine Form von Pseudosozialismus, die eine Bedeutigung für die Menschen im Osten ist.“

Auf den Landesverbänden der CDU im Osten hielt es gegenwärtiger dieser Zeitung, ob er habe, man die Hoffnung gehabt, bis zur Wahl werde es gelingen, die Linkspartei, die im Osten laut Umfragen bei dreißig Prozent liegt, zu stoppen. Das hätte Schönbohm, Worte durchsetzen. Sie sind ein perfektes Geschenk an den politischen Gegner, der damit Wahlkampf treiben werden.

In der CDU wird aber angesichts der öffentlichen Rüge Merkels auch über die innerparteiliche Solidarität gegenüber Schröder sowie über eine „Pannenserie“ in der Wahlkampfführung der zurückgedrängten Woche debattiert. Schönbohm zeigte sich am Freitag verwundert darüber, daß CDU-Politiker seinen Rücktritt forderten, „denn Namen ich bisher nicht kannte – so kommen sie in die Zeitung.“ Er habe in diesen Tagen „einiges erlebt“, werber er sich später einmal“ äußern werde. (Siehe Seite 4.)

Verschmolzen

ma. Die deutsche Medienlandschaft erlebt eine Umwälzung, die ihrergleichen sucht: Springer, der größte Zeitungskonzern, übernimmt Pro Sieben Sat.1, die größte Privatseitengruppe. Springer übernimmt die Sender nicht nur, er verleiht sie sich ein, die Unternehmensvermögen verschwinden, es entsteht ein publizistischer Kolos, wie es ihm nur noch einmal – eine Dimension größer – mit Bertelsmann gibt. Die Konzentration von Meinung, Macht und Geschäft schreitet voran, der Dualismus zwischen den Zeitungshäusern Bertelsmann und Springer und ihrer großen Sendergruppen RTL und Pro Sieben Sat.1 geht auf in einem Zweikampf der Gesamtazoner, der von nun an die demokratiehaltend angesesehen wird? Die Globalisierung der Märkte führt bei den Medien zu einem Maß von Konzentration, das man auch in anderen Branchen mit Vorsicht genennt. Da es hier aber um etwas anderes als um ein pures Wirtschaftsgut geht, nämlich den Charakter der politischen Kommunikation, ist besondere Aufmerksamkeit geboten.

Durch den lukrativen Zwischenauftakt der amerikanischen Investors Saban bei Pro Sieben Sat.1 ist, wo man einen internationalem Mediennomadie wie Murdoch fürchtete, der Springer-Konzern angestellt, der sich mit Zeitungen, Säbern und Internet für das neue Zeitalter, in dem die Medienformen verschmelzen, bestens gerüstet sieht. Auch für die Demokratie legt darin eine neue Herausforderung.

Frankfurter Allgemeine, August 6, 2005

Der Himmel über Hiroshima (The heavens over Hiroshima), by Von Volker Zastrow

The Einstein year and the commemoration of Hiroshima come together in 2005. Sixty years before, in 1945, within three days the United States destroyed both Japanese cities Hiroshima and Nagasaki with the bombs “Little Boy” and “Fat Man”. They were totally new weapons. The first one [of these bombs], named by Robert Oppenheimer after a spiritual sonnet by John Donne, “Trinity”, had been successfully tested three weeks earlier by the pioneers of the “Manhattan Project” in a desert area called “Ground Zero”. A hundred years ago, in 1905, the young physical scientist Albert Einstein had published his revolutionary discoveries about the construction of the world in space and time in three essays. To him belong the acknowledgement of already existing suspicions about the molecular construction of matter and the theoretical discovery of the connection between energy and matter.

Even though Einstein's method was in the first place one of logic and mathematics, his discoveries go beyond human understanding. One can only think about them in the semantics of conclusions. At the same time, also due to Einstein's initiative, especially in quantum theory, and against his resolute and feeling-emphasized resistance (“God does not play dice”), an ambiguity has entered the exact physical sciences, whose solution until now has been worked on fruitlessly. Finally, though not least [significantly] resulting from these discoveries, in our age a total determination, which together with the history of the universe also encompasses the smallest emotions of the human mind, has entered modern natural scientific thought.

Einstein's breakthrough, which opened the mind to the incomprehensible, can be seen as the high point of the Enlightenment. It however also brought it to an end. While he was teaching the laws of the incomprehensible, he also taught, going beyond the former philosophies, the incomprehensible itself. In theology this is called a proof of God. The new ambiguity of physics unwillingly resists the Enlightenment idea of the penetrating light of the Ratio and opposes it with something impenetrable, which it can admit with any mystery, yes, which is equal to such a thing [?]. Surpassing physics, the modern natural sciences factually had to give up, with the Enlightenment, the inseparable connected claim of being free from contradictions. Theories of predestination, in which the idea of freedom appears as an empty delusion, are competing with the restless model of coincidence and probability. Whichever interpretation is given, it will be equally difficult to see some value in human life.

These considerations do not directly concern every main area of Enlightenment thinking, which can be seen as a claim for the validity of the argument against the unreasonableness of power. The Enlightenment also wanted to get rid of religion -- which was often connected with power as well as with mistaken unreasonableness -- so as to liberate humanity from the insignificance of its oppression. But if humanity is finally freed of that, it discovers in a new worldview again only its own insignificance. The proud subject of the enlightenment finds itself a miserably insignificant object.

In that, in the extreme contrast of subject and object, doing and suffering, killing and dying, again power emerges. Nothing has translated this anacoluthic construction [?] of the Enlightenment more clearly into the factual world than Hiroshima: how only one aircraft, only one bomb, only one gunman in only one second from the heavens downward can reduce tens of thousands to nothing and bring measureless suffering to an even bigger number. The message which this contains was formulated as such by the Japanese Emperor Hirohito. He did not know, how he could tell this to his son; he did not want a child to even experience the fact that such a weapon exists. Since then it is not any different for most parents in this respect, with regard to horrors.

In many ways Auschwitz and Hiroshima are connected with each other. Without Hitler's anti-Semitism, the atomic bomb would probably have been developed in the German Reich, considering the scientific landscape in the thirties. The exodus of Jewish scientists from the whole of Europe, enforced by the national socialists, guided the decisive requirements for the building of the bomb to the United States. More than everything before it, Auschwitz has shown what kind of unspeakable horrors depraved humans are capable of performing. The mushroom cloud has shown what humanity brings to fruition [produces]. Therefore Hiroshima is not only the big dividing line in the last century but also a pivotal point in history.

Since that time humanity lives knowing that its destruction is possible. This conclusion can also be reached by other more natural, scientifically insightful roads, from biology or astronomy. On top of that, since Hiroshima, it is very clear, that humanity itself can also bring about the end of its own history. The scientists around Oppenheimer did not know before the bomb test whether the chain reaction would possibly burn the atmosphere. They released the unheard of energy that Einstein had discovered in matter for the first time. It radiated brighter than the sun. In the lightning flash of enlightenment over Hiroshima, the end of humanity became knowable; it has become fixed in the consciousness of modern man as a possibility. Before then, this was a question of faith.

Wie Hiroshima die Weltpolitik veränderte / Von Nikolas Busse

✓ Der Himmel über Hiroshima

Von Volker Zastrow

FRANKFURT, 5. August. Mit „Little Boy“ und „Fat Man“ begann eine neue Zeirechnung. Die Weisheiten in den amerikanischen Regierung erkannten das Risch. Dean Acheson, damals Staatssekretär im Außenministerium und einer der strategischen Köpfe der Truman-Regierung, hielt im Herbst 1945 in einem internen Memorandum fest, Atombomben seien „Entdeckung, die für die menschliche Gesellschaft revolutionär ist, als die Errichtung des Reis“. Richtig. „Wir müssen eine Erklärung weiterführen und zusammenrücken, dann wird es keinen Sieger geben, und es könnte geschehen, daß keine Zivilisation überlebt.“ Little Boy, kleiner Junge, hatten die Amerikaner die Atombombe gemaunzt. In den ersten Jahren nach dem Zweiten Weltkrieg wurden Kernwaffen in Amerika zunächst als Erweiterung des Arsenalen gesehen. Stadtplaner empfahlen die Auflösung von Ballons.

Das Atomzeitalter beginnt, um die Auswirkungen eines Atomangriffs möglichst gering zu halten. Die Reipublic ließ Bunker bauen und den Zivilschutz verbessern. Wie die beiden japanischen Städte verbrannten und verstrahlten, machte dem Militär die Realpolitiker Acheson früher als der meiste Zeitgenossen bewußt, welche ungeheure Neuerung die Atombombe darstellte. Die Kriege des Industriezeitalters, die hatten die beiden Weltkriege noch einmal gezeigt, waren riesige Materialien, die Energie verbrauchten, die Millionen Menschen töteten. Nach dem Atomkrieg war es anders: Alles, was wichtig war, konnte wieder aufgebaut werden. Jetzt konnte man eine Bombe, eine Großstadt ausgleichen, mit einem Dutzend einer Nation getötet werden.

Es dauerte einige Zeit, bis sich diese Einsicht durchsetzte. In den ersten Jahren nach dem Zweiten Weltkrieg wurden Kernwaffen in Amerika zunächst als Erweiterung des Arsenalen gesehen. Stadtplaner empfahlen die Auflösung von Ballons.

Die Amerikaner hatten Teheran mit dem Abbruch der Verhandlungen gedroht, solche Verhandlungen zu unterbinden. Auf dem Friedenstag übernahm der Iran die Atombombe, die die Amerikaner hielten und halfen, um Iran zu gewinnen. Nach Teheran wurde mit dem Atomprogramm Irans begonnen, was ebenfalls stillgelegte Urananreicherungsanlagen in Natanz wiedereröffnet.

Commentary

Geoffrey Wheatcroft Hiroshima
wasn't uniquely wicked. It was part of a policy for the mass killing of civilians

The birth of 'mere terror'

At the time, there was little immediate sense that something utterly extraordinary had happened, or that life had changed for ever. After August 6 1945, popular newspapers wrote half nervously and half exultantly about the coming of the "atomic age"; but the most widespread reaction was mere thankfulness that the Hiroshima 50 years ago tomorrow, and of Nagasaki three days later, was justified by the Japanese surrender, obviating the need for an invasion of Japan which would have meant huge casualties. That may not ever be true, though the debate among military historians remains unresolved.

By the summer of 1945, Japan was already prostrate. Not only were Japanese armies being driven out of the Pacific islands and Burma, American bombers were wrecking the cities of Japan and, in one of the most successful campaigns of the whole war, submarines of the US navy had done to Japan quickly before Soviet Russia joined in.

In any case, that argument begs the profoundest questions of ends and means. In the shadow of the mushroom cloud, few people addressed the terrible enormity of what had been done. Two who did were very remarkable men writing from entirely disparate perspectives: Dwight Macdonald, an American radical atheist, and Monsignor Ronald Knox, a conservative English Catholic.

Once an active Trotskyist, Macdonald was evolving from revolutionary socialism to pacifist anarchism, as reflected in Politics, the brilliant magazine he published from 1944 to 1949. His response to the news from Hiroshima was unequivocal. "This atrocious action places us, the defenders of civilisation, on a moral level with 'the beasts of Maidanek'. And we, the American people, are just as much and as little German people."

After the two cities were destroyed, Knox was about to propose a public declaration that the weapon would not be used again, when he heard the news of the Japanese surrender. Instead he sat down and wrote God and the Atom, an astonishing book, neglected at the time and since, but as important for sceptics as for Christians.

An outrage had been committed in human and divine terms, Knox thought, because the splitting of the atom itself meant "an indeterminate element in the heart of things"; on hope, because "the Hiroshima was an assault on faith, on the relative costs of production". Hiroshima was, but one more step. However, noble Macdonald and Knox's

possibilities of evil are increased by an increase in the possibilities of destruction; and on charity, because — this answers those who still defend the bombing of Hiroshima — "men fighting for a good cause have taken, at one particular moment of decision, the easier, not the nobler path".

That was finely put, by both writers, but there was more to it: should Hiroshima really be seen as uniquely wicked or catastrophic? However horrific it may be that it was not so very different in degree, or even in kind, from what had gone before.

In 1938 the British government had entered the war with high protestations of virtue. Neville Chamberlain told parliament: "Whatever be the lengths to which others may go, His Majesty's government will never resort to the deliberate attack on women and children and on other civilians for the purposes of war." This grew out of the exigencies of war, immense development if you had to — any Englishman a pacifist a hundred years ago — that before the century was out warfare would largely consist of killing civilians.

But that was what happened. During the recent Kosovar war, a French officer asked bitterly if this was to be the first war in history in which only civilians were killed, and yet we had long since begun to go down just that road. It is sobering to compare the 300,000 British uniformed servicemen who died in 1939-45 with the 600,000 German civilians killed.

Making war on civilians took a further turn in the Far East, and not only because of the Japanese army's own atrocities towards conquered peoples.

Before August 10-15, very many Japanese had already been killed by conventional bombing. On one night in Tokyo, US bombers killed 85,000 civilians — more than 300,000 were incinerated in great fire raids over the following months. And so it was that, as Evelyn Waugh put it when writing about Knott's book in 1948, "To the practical problem of the atom bomb presented no particular moral or spiritual problem". We were engaged in destroying the enemy, civilians and combatants alike. We always assumed that destruction was roughly proportionate to the labour and material expended. Whether it was more convenient to destroy a city with one bomb or a hundred thousand depended on the relative costs of production.

Hiroshima was, but one more step. However, noble Macdonald and Knox's

possibilities of evil are increased by an increase in the possibilities of destruction; and on charity, because — this answers those who still defend the bombing of Hiroshima — "men fighting for a good cause have taken, at one particular moment of decision, the easier, not the nobler path".

The burning and the haunting: how for some the nightmare of Hiroshima will never end

Survivors describe the horrors of August 6 1945 and the scars that remain

Gavin Rees in Hiroshima

At night, Akiko Takakura has the same dreams, ones in which she sees bodies floating in her local swimming pool — ages that confronted her when she calls "the city of death". Nobody who survived Hiroshima 60 years ago today was closer to the explosion than Mrs Takakura, and she holds a special place in a group of "hibakusha" — the atomic people.

The nightmares that have stayed with her are understandable, but probably the most manifest manifestation of the physical and mental scars that remain with many of those who survived. Some hibakusha have only started to talk publicly about their experiences in the last decade. Although they now receive special state welfare provision and much public attention, for many years after the war they were stigmatised. Women, in particular, found it hard to marry.

"They used to call women like me a 'hibakusha girl' or an 'atomic girl,'" said Kinuko Laskay, who was 16 when she was caught in the blast. "They would say you don't know what sort of a baby she will give birth to. Others said that the radiation could be genetically transmitted or was even contagious."

Mrs Laskay attempted suicide several times before marrying a Canadian serviceman and emigrating to Vancouver. The explosion split open one of her eyes and drove hundreds of shards of glass into her body. For a whole year her mother covered up reflective surfaces including pants, to prevent her daughter from seeing her disfigurement. By the time of her death last year, she had had numerous operations that had eventually made the visible damage almost indiscernible.

Flashbacks, hyper-vigilance and poor sleep have been reported among hibakusha. Many survivors become very anxious when talking about their experiences, as if they are stepping back into the horrors they are describing.

In Japan, where discussing mental illness is taboo, both doctors and survivors play down the possibility that some victims of Hiroshima might be suffering from post-traumatic stress disorder, emphasising instead the desolation caused by losing loved ones and the anticipatory fear of radiation-related illness.

One former soldier described himself as having had avoided being traumatised by drinking heavily. "Hearing people shouting 'help is coming' I dreamt about for a long time. But now it has been over 60 years and I seem to dream less."

A visitor to the museum in Hiroshima peace park looks at an archive photo of the site of the bombing. Photograph: Franck Robichon/EPA

he says. Others still have to cope with the physical effects associated with radiation-causing clusters first began to appear in 1953. 16-year-old girl in charge of driving a train when the bomb struck. Afterwards, she suffered from long spells of debilitating lethargy.

Then a striking young woman, she watched her skin age prematurely from the effect of thyroid disorder. Both her children have "thyroid-related poor health; and although a proud mother, she sometimes wonders whether it was selfish to have had them.

Beyond the mental and physical effects, the survivors still express inearable woe, despite all the explosion caused them. "People ask me how I have died instantly," people ask me how I survived. I find it strange too," she says. "People that had been walking, the streets were dotted up dead over each other for as far as we could see. They had died immediately. Naked. Burnt. I just asked myself, why?" Like many survivors she be-

charte signée en 1992, dans les établissements financiers s'engageaient à « offrir des services bancaires de base à tous », qu'il soit nécessaire de « déterminer a priori » les particuliers qui étaient de ces services, n'a pas été suivie de faits.

ant au dispositif du droit au vote inscrit dans la loi, imposant un refus humiliant suivi d'un rejet par la Banque de France, sévique et stigmatisant, sans tenir des délais d'attente pénaliser, il ne concerne qu'un nombre restreint de bénéficiaires.

is la pression des consommateurs, de leurs organisations, les usures ont récemment apporté une réponse, purement commerciale à l'exclusion bancaire à travers des offres de panier de services que ne discutera même pas l'opposition quant à leur contenu ou niveau de prix, tant que le principe de fond restera entier : la décision est discrétionnaire et garde d'accepter ou de refuser l'accès de leur offre au consommateur.

façant campagne pour un service universel (SBU) instauré par voie législative, nous nous devons aux réactions épidermiques adversaires de l'interventionnisme. La proposition n'est pas reconnue idéologique et n'est pas affichée comme une doctrine sociale particulière. La preuve en est que, de l'avavis du Conseil de la concurrence, ce service universel peut se justifier lors que les services sont essentiels, reconnus comme être général et que les mécanismes de marché ne suffisent pas à faire la demande.

Etat serait parfaitement dans l'obligation de garantir les termes du contrat social qui lie dans une forme de droit tous les membres du corps économique et politique.

delà de ce principe fondamental, aucun se souvient que le gouvernement a reçu du président de la République le mandat de réduire la structure sociale et de soutenir la domination. Dès lors, en refusant de participer à la contribution générale que le politique demande par ailleurs à d'autres opérateurs privés, tels que France Télécom ou EDF, les banques feraient

valoir un droit inique à bénéficier d'un régime d'exception, d'autant moins justifié que leurs bénéfices cumulés frisent l'insolence.

Ajoutons encore que l'effort consenti, loin de remettre en question l'équilibre général de la banque de détail, serait tout à fait dérisoire au regard des revenus

ALAIN BAZOT est président de l'UFC-Que choisir.

généralisés : le coût global d'un SBU représenterait moins de 0,18 % du produit national bancaire. Nos études ont établi que son coût économique n'atteindrait pas les 150 millions d'euros par an alors même que le nombre de ses bénéficiaires dépasserait les 2 250 000 personnes. Il est donc parfaitement possible de concilier dimension sociale et rationalité économique.

ÉDITORIAL

La mémoire et l'oubli

SOIXANTE ANS après l'explosion de deux bombes atomiques sur les villes japonaises d'Hiroshima (le 6 août 1945) et de Nagasaki (le 9 août 1945), il apparaît cruellement que la réflexion sur l'usage de l'arme nucléaire et la volonté de puissance n'a guère progressé. Six décennies ont passé et l'on pourrait reprendre l'éditorial d'Albert Camus (1913-1960) paru dans *Combat* dès le lendemain de la première explosion :

« (...) la civilisation mécanique vient de parvenir à son dernier degré de sauvagerie. Il va falloir choisir, dans un avenir plus ou moins proche, entre le suicide collectif ou l'utilisation intelligente des conquêtes scientifiques. »

Mais le Prix Nobel de littérature n'a pas été écouté. En réalité, même les dizaines de milliers de civils pétrifiés et comme vitrifiés à l'instant de la déflagration, même les survivants irradiés et condamnés à d'infinites souffrances se sont estompés dans la mémoire collective. La preuve en est, accablante, que de moins en moins d'élèves japonais s'avèrent capables d'indiquer sans se tromper la date d'Hiroshima et qu'il arrive, dans ce pays, que des monuments érigés en hommage aux victimes soient profanés par bêtise, ignorance ou inconscience.

Ainsi la nation la plus concernée, frappée dans sa chair, est passée, sur cette question, de la censure (entre 1945 et 1951) au culte des victimes pour se heurter aujourd'hui à une terrible difficulté : échapper à l'obsession mémorielle sans négliger la transmission de la mémoire. Du côté des Alliés, et plus précisément chez

les Américains, qui ont conçu, fabriqué et largué les bombes, la mémoire s'estompe aussi. La mauvaise conscience ne travaille qu'une minorité, souvent pénétrée d'esprit religieux.

Le souvenir même de l'événement, qui ouvrait par la violence une nouvelle page de l'Histoire, diminue dans les mass media. L'évocation de ce que certains considèrent comme un crime majeur est le plus souvent relativisée et justifiée comme un acte de guerre nécessaire ayant permis d'épargner la vie de nombreux soldats américains et japonais. Ce raisonnement statistique, qui permet d'évacuer la réflexion sur les massacres modernes, clôt le débat prématurément dans un pêle-mêle d'absence de lucidité et de manque de courage.

L'humanité semble avoir approuvé cette nouvelle peste au cours d'une longue guerre froide (1948-1989). Soixante ans plus tard, elle n'aurait donc rien appris, sinon à survivre dans un précaire équilibre de la terreur. Parmi les nations, la course à la possession du feu nucléaire est, aujourd'hui comme hier, ouverte. La Corée du Nord, l'Iran, le Pakistan ou la Libye en rêvent. Les premiers membres du club nucléaire (Etats-Unis, Grande-Bretagne, Russie, France, Chine...) sont rattrapés dans leur ambition de pouvoir et de sécurité.

Qui a donc écrit : « La bombe atomique est trop dangereuse pour être confiée à un monde sans loi ? » Harry Truman (1884-1972), le président des Etats-Unis qui a pris la décision de frapper Hiroshima et Nagasaki. Son propos est toujours d'actualité.

France, editorial, 6 August 2005

Memory and Lapse of Memory

Sixty years after the explosion of two atomic bombs over the Japanese cities of Hiroshima (6 August 1945) and Nagasaki (9 August 1945), it seems, cruelly, that the reflection on the use of nuclear arms and the quest for power has hardly progressed at all. Six decades have passed, and we can look again at the editorial by Albert Camus (1913-1960) that appeared in *Combat* the day after the first explosion:

“...technological society has just reached its highest degree of savagery. It will be necessary, in the near or not so distant future, to choose between collective suicide and the intelligent use of scientific advancements.”

But the Nobel Prize winner in literature was not heard/listened to. In reality, even the tens of thousands of civilians petrified at the instant of the conflagration, even the survivors who were radiated and condemned to unending suffering are fading from our collective memory. The damning proof is that fewer and fewer Japanese students are capable of giving the date of the Hiroshima bombing without making a mistake, and that in this country the monuments erected in homage to the victims have been vandalized, out of stupidity, ignorance or unconscience.

Therefore, regarding this question, the nation that is most concerned, has passed from condemnation (between 1945 and 1951) to a cult of the victims, to face a terrible difficulty today: how to escape the memorial obsession without neglecting the transmission of the memory. On the side of the Allies, more precisely the Americans, who conceived, made, and launched the bombs, the memory has failed too. Only a minority are troubled by a guilty conscience, often in connection with some kind of religious belief.

Even the remembrance of the event itself, which opened a new page in the history of violence, is diminishing in the mass media. The evocation of what is considered by some as a major crime is most often relativized and justified as a necessary act of war that spared the lives of many American and Japanese soldiers. This kind of statistical thinking, which allows us to avoid reflecting on modern massacres, closes the debate prematurely on what was a jumbled absence of lucidity and lack of courage.

Humanity appears to have approved this new pestilence/plague in the course of a long Cold War (1948-1989). Sixty years later, humanity has thus apparently learned nothing, unless it is how to survive/exist in a precarious balance of terror. Among nations, the path to the possession of nuclear weapons is open today, just as it was yesterday. North Korea, Iran, Pakistan and Libya dream of it. The first members of the nuclear club (the U.S., Great Britain, Russia, France, China...) are trapped in their power and security ambitions.

Who, then, wrote the following words: “The atomic bomb is too dangerous to be trusted to a world without law”? It was Harry Truman (1988-1972), the President of the United States who made the decision to bomb Hiroshima and Nagasaki. His words are still relevant.
